

Airbnb Berlin Performance

Visual Analytics Assessment

Vyshak Sugunan

Agenda

- Project Objectives
- Data and Analysis Methodology & Wireframes
- Final Visualizations: Tableau Dashboard
- Key Insights
- Future Steps

Project Objectives

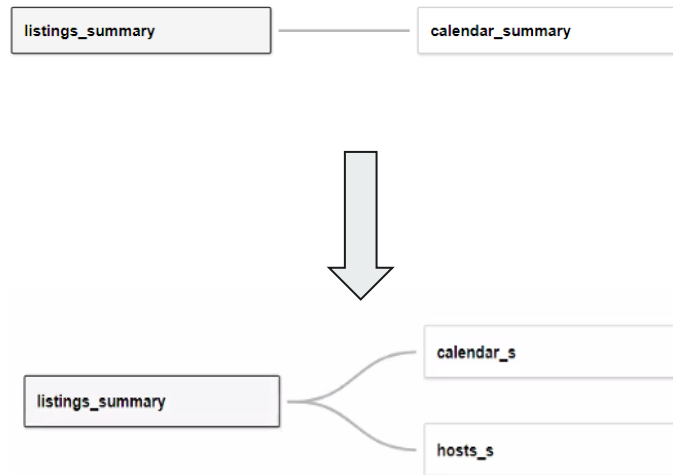

- **Assessing Overall Market Performance of Listings**
 - Identify the factors separating high revenue listings from under performing ones
 - Identifying top revenue generating neighbourhood
 - Recommend strategies for improving poor performing properties
- **Evaluating performance of Host Listings**
 - Identifying and tracking the characteristics of top performing hosts
 - Highlighting traits of superhosts' success
 - Recommend strategies or best practices for all the hosts on Airbnb.

Data & Analysis

Data Description

- **Original Tables:**
 - Listings_summary: 22,552 listings, 90+ columns
 - Calendar_summary: 8,231,480 (367 days)
- **Time Frame:** November 2018 - November 2019
- **Main Parameters used:**
 - Availability
 - Price
 - Score Rating
 - Neighborhood names & locations
- **Calculated Variables:**
 - Occupancy – for each listing calculated as % of total days available
 - Revenue - derived from occupancy multiplied by listing price
 - Price / Sq ft, Revenue / Sq ft – for each neighborhood

Analysis Methodology

- Data pre-processing and exploratory data analysis
 - Created new data tables for faster processing and ease of analysis
- Finalizing Scope of Analysis -
 - Narrowed scope from initial 2 personas into 1
 - Identified dashboard targets - listing market performance, individual host performance
- Creating Wireframe and Tableau Dashboard

Wireframes

Performance Dashboard Wireframe

Objective: At the Neighborhood level - check characteristics that makes certain locations more appealing than others
Audience: Airbnb officials and potential Customers

Revenue/sq. ft vs Price/sq.ft
Neighborhood (Size quantity of listings or available)

Host Dashboard Wireframe

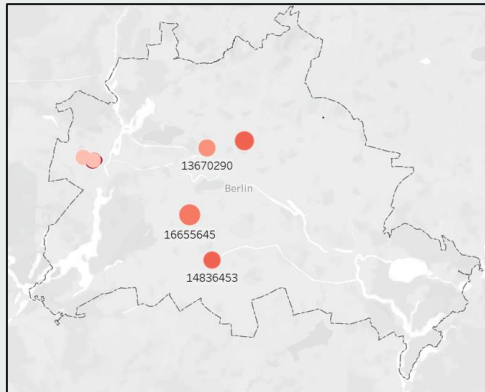

Objective: At the Host level - compare key metrics about listings to the average ones and identify which types are more popular.

Audience: Airbnb officials and Hosts

How do
you
compare
with other
hosts?

	Avg. Rating	Avg. Response Time	Avg. Price	Avg. Number of Amenities	Avg. Number of reviews

9	161221	31.5	97.6	7.0
10	109353960	29.6	89.6	9.0

Key Insights and Recommendations

Key Insights

- **Listing and Neighborhood performance**
 - **Summers are more profitable than other months** - December is an outlier
 - **Location matters** - Highest performing listings by revenue have high price per sq. feet but have poor quality score
 - **Xmas bonus** - Neighborhoods charge their highest price in the Christmas season(Nov-Dec)
 - **Least popular neighborhood** (based off occupancy %) seems to be the eastern neighborhood of Marzahn-Hellersdorf

Key Insights

- **Host performance**
 - **Superhost?** - Only 4 out of the 10 top hosts by Revenue are superhosts
 - **Primary business** - Hosts with multiple listings bring in a huge share of revenue even though majority of hosts own a single listing
 - **Undivided attention** - Hosts having listings in the same neighborhood tend to have better reviews and higher chances of being a superhost
 - **“Mitte” matters** - Most hosts with higher revenue have listings in Mitte neighborhood

Future Steps

- **Additional Data Inputs from Client**
 - More Historical Data
 - Data from different cities to compare
 - Knowledge of industry or company's benchmarks
 - Understanding company's long-term goals
